The bubble chart displays the distribution of 1000 random samples of 1000 genes each. The x-axis represents the number of genes in the top 100, and the y-axis represents the number of genes in the top 1000. The chart shows several distinct clusters of bubbles, indicating different patterns of gene expression across the samples. A large green cluster is prominent on the right, while a smaller orange cluster is on the left. Each bubble is labeled with a gene symbol, and lines connect related genes within a cluster.
