Figure 1 is a bubble chart illustrating the distribution of 1000 simulated individuals across 1000 simulated years. The x-axis represents the year (0 to 200), and the y-axis represents the number of individuals (0 to 1000). The chart shows the movement of individuals over time, with bubbles representing the population of each group (IVEGOR, ELYLAN, HETVIL) at each year. Lines connect bubbles of the same group across different years, indicating the trajectory of the population. The chart shows a general trend of individuals moving from the bottom-left towards the top-right over time.
